## **FLOORMATS CLEANING PROCEDURES AND EQUIPMENT**

\*The CC MATTING WORKSAFE® and CC MATTING HEAVY DUTY® polymer floor mats remove and hold a great deal of contamination from feet and wheels.

\*The best way to clean the CC MATTING® floor mats is by incorporating the cleaning process into your standard everyday cleaning schedule. Using your facility approved disinfectant or detergent along with your approved mopping system.

\*An important added step is the squeegee drying which removes the remaining liquid and prepares the floor for immediate re-use.

CC MATTING recommends the use of your facility approved detergent or disinfectant to clean the CC MATTING® polymer floor mats. It is much easier to add the CC MATTING® mats into your standard cleaning procedures, with the squeegee drying additional step.

DO NOT USE the following items when cleaning the CC MATTING® polymer flooring: Bleach Concentrates over 10%, Abrasive Cleaners, Buffing or Polishing Equipment. Additionally, Acetones, Keytones, and Oil can harm the polymer surface unless wiped up within 15 minutes. The only known detergent/disinfectant which can harm the surface is MegaClean.

Most walk behind floor cleaning machines can be used on the CC MATTING® floor mats but only with the softer bristle brushes. The consistency of the cleaning machine and the fact that the dirty water is squeegeed and vacuumed off the surface immediately makes these machines a good option for cleaning the mats.

Steam cleaning any polymer floor mat system will reduce the active life of the floor mats and should be done only as a last resort.
